Peters, M.D. Berlin Akad., 1872, p. 684
(T.L. Dugon; A.D. Meq. coll.) is it a
Tropidophorus or a Sphenomorphus (= Himulia +
Otosaurus + Hemolepida)

Euprepes imbricatus (?) Naiti.

Protonopsis

1824 Protonopsis "Dartoni" deCorte, Ann. N.Y. Lye. vol 1, pt. 1, p. 57: "It was called by the late Dr. Darton, who probably examined before anyone else, Protonopsis".

Darton: A memoir concerning an animal of the class of reptilia or amphibia which is known in the United States by the name of Alligator and Hell-Bender.
Philadelphia (1812?) - 1814.

Photo Record 1

Film A

Mar 17/1-9 Rome -

Apr. 2-10 Museo Civico S. N. Genoa. 4 pm.
cloudy.

Film B

Apr. 22 1) Bassano, Veneto. 9:15 am sun. 52 f.

View from terrace of Villa S. Maria showing
in the center, the opening of the gorge of

the Brenta. The picture also illustrates the
river terrace, the abrupt rise of the

mountain from the plain, and the almost
complete barrenness of the ^{top} ~~side~~. ^{Vegetation?} ~~Flora~~
concentrated close to the top.

2) Do. to Val Frenzida 12:45 pm 64 f. cloudy

Part of road at upper end shown. The
steps for ascent and the smooth ~~side~~ paved
left hand space intended for sliding down
the jagged.

3) View in lower part of Val Frenzida,
1:30 pm sun. 64 f. to show steepness
on terracing above house

REMARKS.

(OVER)

Pour compléter les préparations pour l'usage de cette cartouche dans la cuve ou la boîte Brownie à développer, veuillez procéder de la manière suivante.

Au moment que vous êtes prêt à développer (en tenant la bobine avec la côté non imprimée du papier noir en haut) déroulez lentement le papier noir jusqu' à ce que vous avez découvert la partie collée qui est fixée au bout de la pellicule et qui sert pour attacher la pellicule au papier noir. Humecter ce papier environ 3 centimètres du bout et l'appliquez au papier noir en le pressant fortement. Enroulez de nouveau le bout du papier noir sur la bobine, et la cartouche est prête pour le développement dans la cuve.

K. P. 390 D

To complete preparation of this cartridge for use in the Kodak Film Tank or the Brownie Developing Box, proceed according to the following directions:

Just before you are ready to develop, (holding spool with the unprinted side of the duplex paper up) unroll the paper carefully until you uncover the piece of gummed paper which is fastened to end of film and is to be used as a means of fastening film to duplex paper. Moisten the gummed side of sticker evenly for about an inch across the end and stick it to black side of duplex paper, rubbing thoroughly to secure perfect adhesion. Wind end of duplex paper on spool again and the cartridge is ready for tank development.

EASTMAN KODAK CO.

Rochester, N. Y

Um diese Patrone zum Gebrauch in Kodak Kübel-Entwicklungs-Apparaten, oder in Brownie Entwicklungs-Kästen vorzubereiten, verfähre man laut nachstehender Anleitung.

Kurz bevor man zum Entwickeln bereit ist (man halte die Spule mit der **unbedruckten** Seite des schwarzen Papiere nach oben), rolle man das schwarze Papier sorgfältig ab, bis ein Stück des gummierten Papiere erscheint das am Ende des Films befestigt ist und als Mittel dient, den Film am schwarzen Papier zu befestigen. Man befeuchte ca. 3 cm. vom Ende dieses gummierten Papiers klebe es auf das schwarze Papier und drücke es sorgfältig fest. Hierauf winde man das Ende des schwarzen Papiere wieder auf die Spule, worauf dieselbe zur Entwicklung im Apparat bereit ist.

Berlin Mus. Exam. 5 June 13

P. 9

Tropidophorus leucospilus Types

D. M. No. 7467. Luzon, Dr. Meyer.

Sign: dygrosoma (*Himantia*) *leucospilus**
(the * meaning type). 2 spms.
in good condition.

Tympanum large and quite superficial, just below the rounded edge of the ear opening. — 25 (not 25)

Agrees well with Boulenger's descr. *Luz. III. 360*, but the white spots are not solid but consist of clusters of smaller white dots plainly separated, 3-6 or more, each one at the tip of a separate scale; fronto-parietal and parietals also white spotted as also temporals, ~~posterior~~ labials ~~posterior~~ from under preoculars and backward, the latter also with a white dot; rest of head without white spots; humerus and femur with less ^{brown} pigment than rest of upper surface.

Durbin Mus. Exam. June 5, '13

Rana vittigera & *regulosa* W. Fries

Printed outside labels. No original labels
inside or outside of!

No 3269 Laguna de Bay. Megala
~~typ~~ vittigera 2 spec ~~typ~~

No. 3270 *Traces* Megala
vittigera 2 spec

No. 3271 Cap. Syngomon Megala
regulosa 1 spec.

The latter is undoubtedly tigerina

No. 3269 from Laguna de Bay is
undoubtedly from P. I. and
distinct from tigerina. The
location of the nostrils and the
length of tibia are obvious
characteristics.

Now, so far as I can see, the
Traces specimens, no 3270, are
identical with the P. I. ones, as correctly
seen by Wiegmann, and I believe that
the locality Traces is wrong.

Berlin Mus Exam June 5 13

1)

Rana gracilis and *limnorcharis* Types

No. 3255, Cap. Svingnor. Begun &
gracilis Type.

No. 3265, Java ♂ & ♀ Wagler.

Sign: "*Rana limnorcharis* Boie"

(3265)

They are evidently the types of
Wignmannia limnorcharis. It is
characteristic, perhaps, that in the
old catalog these specimens are
recorded as *R. tigrina*. They
differ decidedly in the more forward
position of the vomerine teeth, the
anterior edge of which is flush
with a line drawn through the anterior
border of the choanae, but they are
not close to the choanae as in typical
Chinese *tigrina*, in other words the
vomerine teeth of these Javan specimens
are exactly as described by me in
Bornean specimens (Rept. Jap. p. 142)
The Japanese, Formosan and Chinese
small species (see exam. No. 19587
Suisha Lee, Formosa, Habuwa; no

Rana gracilis Linnaeus 2

14268, Hoje and Kinnin, Dr.
Krefft; and no 3255 type of
gracilis) therefore must be called
Rana gracilis (Linnaeus
Douglas, F. Br. Ind., n. 1199)
while the Javan one called
R. tigrina probably should stand
as R. timmochow [?? see p. 3]

Rana brevipes Peters^m
Peters, no. 6130, apparently has
also sometimes and and
is not gracilis, as far as I can
make out without opening the jaw.

Orlon, Mass

Rana gracilis etc. 3

With regard to the vomerine teeth
in Japan specimens, however, it should
be noted, that No. 3264 from ^{and No. 3273 from Nagasaki, also adult} ~~Madagascar~~
~~Leiden Museum~~ which ~~Wiegmann~~
consequently had before him when
describing *biannulata* and *gracilis*,
have the vomerine teeth exactly as
in typical *tigrina*. Whether the distinction
from the *choana* therefore be due
to age remains to be seen. Their
anterior position is the same in
the small and the larger Japan
specimens.

All mounted two and two
alcoholaria, back to back on
a high (to my navel) iron
table. Between the two a
ground glass plate to give
depth and mounting looking
through. No 3 has a blue glass
plate for background against
windows. The Tables stand
each in front of a window

Microc 4

Above is a "Case label" with title as above. Below, hanging on a hook a large 12×16 " label, consisting of a large color photo of the group, each animal and plant with a number corresponding to the name list printed below. The whole in a narrow metal frame and covered with a celluloid plate.

Similar label in the large coral reef case. In the latter a flying horn.

This group is located with its narrow side against a wall between two openings: 22' (or in) long & 16" wide.

Background a scene in the Red Sea. The viewpoint was formerly the floor, but was too low. It is now raised on a ^{at the} ^{small} nubble platform 4' high, with steps

leading up to it, but is now too high, being flush with the imaginary water surface (painted line on glass) while the proper height would have been the ~~bottom~~ of the sand bottom, at. 24 inches from floor, as the reef would look to one watching over it.

A group supervising part of a dives after sponges in a well in platform is dark and hardly visible. The latel heads.

Schwammgrund und Schwammtaucher im Mittelmeer. Fischerei von Herrn A. Lewin, Schwammimporteur in Berlin. Die Gruppe steht ein Stück Meeresgrund in etwa 10 m. Tiefe nahe an der Küste das der felsige, in Stufen abfallende Grund ist mit

December. Mus II

The large group (20 feet by
about 1000 feet) of the Hardsee?
dog, mounted preserving
large fishes - bass.

Over it is a beautiful painting
covering the whole wall and
representing a sandstone
island (Heligoland?), and
a fishing steamer in action.

It occurs to me that
the water colored fishes might
be kept in formalin if after
having been thoroughly ^{dehydrated} ~~fixed~~ in
absolute alcohol they were
submerged and given a coat
of gelatin which would become
insoluble after a short immer-
sion in (about 5% formaldehyde)
full strength formalin.

July 7

1913

Apr. 27. Kereita is still in Upper Avestime
and so may be considered the narrow
valley from Miori to ^{Wag} Torbale at the
head of the Juba Lake. Fine yards
extend through some of the
rock blocks which originally fill
the pass and before cultivation must
have been unapproachable transition.
Perhaps some of it might be taken
to be considered the upper 100 meters.
Below the Torbale slope the olive
groves extend on the East exposure
up to at least 250 m.

The river streets lined with palm
and acacias.

On slopes exposed to the E and W.
The olives do not extend more
than a 100 feet above the lake level.

The top of the isolated mt. between
Torbale and Kereita is in Upper Avestime

West shore. (Lemons)
Apr. 27. Lake Garda. Citrus fruit is
cultivated under cover, above which

Life 8

the olive trees extend some distance,
while palms and bananas are uprooted in
thicket places in the gardens.

At Gardone the olive woods extend,
sometimes solidly, up to at least 150 m.
above the lake level.

Apr. 28.

Did not see one olive tree below Vicenza and Padua.
Rochette to Ariago. At ^{ab. 350 m.} Cogollo, the
ascent by cogwheel begins, and here
apparently the wine culture ceases
also mulberry trees, that is it practically
ceases on the mt. slopes as C. is right
at the beginning of the latter. Vineyards
extend apparently for at least 5 km.
up the valley in the bottoms.

Apr. 29. The high mountains are too far
away to say anything definite about
timberline, but looking from Ariago
it seems as if the spruce, which is
here the prevailing tree goes clear up

Life 9

to the line. Whether this is the natural
timberline it is not possible to say from
here but is rather doubtful. Unfortunately,
the Forest Inspector, whose office is located
here, is absent, so I can get no information
from him. On the near hills, possibly
300-400 m. above Araya (which is 1200 m.)
~~the beach grass~~ beach forests, more or
less mixed beach and spruce forests, and
unmixed spruce go clear to the
top. In the distant high mts. the
brown lies below timber line. Here
the trees have not begun sprouting yet,
and the fields are in places white
with crocuses.

The narrow gorge of Val Fonzela
is distinctly Canadian almost all
the way down to Valstagna. The few
vine yards on exceptionally favorable
terraces at lower end hardly count, and
may perhaps be called transition.

Of birds I saw but few in Val
Fonzela, viz. *Troglodytes*, *Parus*

Life zone 10

• ^{above St. Mary}
Things, and at upper end, what I took
to be an *Emberiza citrinella*.

At Arroyo I hardly saw ^{or heard} a bird.

Valenzuela

Pines in - above Arroyo

• May 8 Mendocino

The woods above the vineyard (650^m)
consist of mixed beech and pine
with scattered larches (planted?)

and a few ferns which become more
numerous higher up (about 1000^m) mostly
then with the larches taking the
place of the pines, which become scarce.

At the Sta. Mendocino pass (1350^m)
the beeches become scarce and
the woods continue larches and
spruce. Long leaved pines (some?)
begin here.

Lifegum 12

May 14-15. - After having failed to enlist the help of any of the natives, Dr. Suckewer not being here, and Seb. Muck's halcyon in Tschernau, the "Muggischewitzgerer" being too busy with other work, besides not seeming to know anything about the field and wood animals, I decided to take a room at Steger's, about 550 m, located above St. Valentin and Trautmannsdorf in Obermaier's, and being near the spruce woods of the Haufschluck.

A number of traps were set out in the evening of May 13 and visited in the morning of the 14. The only ones visited by mammals were those set above the farm clearhof, about 700 m., near a cold streamlet in the lower edge of the woods consisting chiefly of Picea with an occasional Larix and Fagus. Other trees and bushes observed were Taxus and Alnus. The ground was covered with sphagnum among which Erica (?) and Viola were the only plants blooming, though a little further

May 13

among in a little better ground the
purple or white lilies I found,
but the leaves of *Fragaria*, *Oxalis* and
Hepatica ~~caerulea~~ were very frequent, though
in blossom. — Here 4 stars spotted
were caught, two of which very young
and one adult, drowned in stream and
partly eaten by various water insects
were not preserved, only an adult male
was skinned (No 19131).

The other lot of traps were set a
little higher up in a much drier
place, almost exclusively *Picea*. There
was not a sign that any of these
traps had been touched by any kind
of animal. They were therefore left
standing.

In the evening two dozen traps were
set in various places in the spruce
grove, among rocks, under roots
and in many other likely places,
but upon being visited in the morning
of May 15, not one had been touched.

May 10

and the most readily are taken up.
The inhabitants here don't seem to know anything about field- or wood-mice, they are evidently not troubled with them. The only animal plague they have to deal with is that of the moles, and that does not seem to be serious.

On account of the threatening weather on 15th, but few traps were set out. Some plants were preserved.

May 19. Schlanders, Vukobegovo.

In a garden ^{both, enough} a large old fig tree with plenty of figs. Principal fruit raised apricots.

Trip to Schlanders and back.
Pridike states that the "wein beer" begins at Schlanders. So it does. A narrow belt of ab. 200 feet above the valley floor on the side facing S is terraced up with vineyard and orchards and cut out of the lower edge of the conifer woods. A small chestnut

July 15

is located among the vineyards at the extreme west end of the town. On the opposite slope of the here wide valley there are no vineyards etc.

This narrow belt, often much narrower and often interrupted continues eastward to Töll where it is broadly interrupted by the grass fields covering the floor from Zillthal which here fills the Vintchgauer valley - or rather ends it, as the Etzcland begins here. Below Töll we have the Upper Austria in all its glory.

The Vintchgauer valley floor is taken up almost exclusively by grass fields, the orchards mostly found on the terraced farms on both sides.

At Schladten the vineyards extend to about 770 met, but the slender string of vineyards on the N. side of the valley would hardly justify its being classed as Upper Austria. The boundary of this must be set at

July 16

about 525 m. except at and
below Meram when it goes to ab. 600
on the N. slope.

On slopes^x of both side of valley
of V. tragus (a exposure) the
vegetation consists of aspens, birches,
hazels excepting junipers and conifers,
much as in Oregon, f. ca.
^x clear down to the valley floor
(old lake bed?)

Asiago Apr. 29. 1913

Museo archeologica & paleontologica

The specimens are so jumbled
and the labels so disorganized that it
is often impossible to say where
they have come from. Thus there is
a series of flint implements
which have no locality label, except
that there is, inside the case, a
general label "Dostal-Rotzo", but
then the case contains many
heterogeneous things which evidently
were not found there, there is a
fragment of Roman mosaic from
Caldiero, a "Idolo egiziano",
etc.

Museum of Natural History

No case label, but new door a neatly written Avis in narrow oak frame

Avis

Les animaux placés dans les vitrines latérales de cette salle proviennent pour la plupart des croisières de l'A. S. le Prince etc.

Ils sont classés d'après l'ordre biologique suivant :

- 1° la faune libérale, qui habite le bord de la mer jusqu'à une profondeur ou l'agitation des vagues cesse de se faire sentir, à 50 m. environ (vitrines 1 à 12)
[only the initial number of each series of sections (vitrines) are marked on the cases]
- 2° la faune côtière, qui habite plus bas jusqu'au dessous du bord du plateau continental. La

Monacon Museum

All jars square, except those
over 27 inches which are cylind-
ers (highest 54" total height)
specimens mounted on milk
glass plaques, but all fishes
standing on tail. No attempt at
coloring.

Arrangement continuous ~~and~~
~~alleged systematic~~ but not
careful. Labels written on
white paper and mounted on top
of jar in a nicked holder
forming a cross + 

Wall case uniformly 28" deep but
jars placed near front

Support of glass shelves, angle iron.
All iron frames painted gray.

Unbleached cotton curtains on
rods at windows - like ours

3

Monkeys Room

Model of Golfe de Tadjourah,
mounted seals on snow
(with poison bottle between
hind legs.); *Leptonyxotis weddelli*
(fair); one to Iv. do.; one to do.
~~do~~ 1 *Phoca barbata* (Spitzberg)

Also alcoholics

Manatus, Riv. Amazon, young
and fetus of *Globicephalus* in
aquaria (alcohol) mounted in brass
cups. 5' x 30" x 6' x 20"
both about 15" deep.

Windows 88 inches above floor
giving ample space for continuous
wall cases around the hall. These
are with iron frames, but wooden
bottoms, bases, and top moulding.
All woodwork, including floors,
door trim, bases, and plaques of
all description, tables etc in
natural, unstained oak, dull
finish. Shelves plate glass.

Life 7. 1

Bassano 1

Apr. 20.

Bassano (Vento) 129 m.
above the sea and located at
the foot of the mountains which
rise abruptly from the Venetian
plain, is still in the lower
Quaternary. The city is about 2
miles from the very edge of the
mountains, on both sides of the
river Brenta. The evidence of
the lower Quaternary consists in
considerable "forests" of olive trees
on the slope of the lower river
terrace — but not in the cultivated
low alluvial river plain which
is occupied mostly with orchard
and vineyard; also the presence
of fairly large palms and
^{india} *Dracaena* in many gardens.
The lower Quaternary seems to extend
to the very foot of the mountains.
Cypripediums are quite common.
Apr. 21. The olive trees extend some

Aug. 2

Patagonia 2
Val Saguna

no.

distance up on the slopes of the
first hills perhaps 300 feet
Apr 21.

Amurice olive trees to just above
Solagna and stop before reaching
S. Nazario. S. there is the boundary
of Lower Quaternary.

- The people here are predominantly
medium blood with grey eyes -

Vinayard's stop in the narrow
gorges following Val Saguna, but
some appear again, with peach orchards
at the widening of the valley at
Cismonone. It's marked almost to the
top, nearly vertical with most
picturesque peaks and valley sides
are traced to the limit.

A few grapevines above at Orisop-
lano, also peaches; so at Teggio,
more so at Tignone, where the
terraced north slopes of the district
fallen from the vertical walls, are cultivated
fully 100 feet up. Also in the valley

Sept 3-3

Passage 3

looking what looks like & mulberry
trees, though leaves not out yet.
These conditions are better at Oquendo.
At Villallegua - Siquis the valley is
quite wide and distinctly Upper Austral
though little plenty of snow on
the northern slopes? So is at
Pongo. At Roxo the blossoming
peaches more than 200' over valley,
mulberry trees, large corn (maize)
fields! 535 m. Novalesa do.
Similar conditions prevail around
Levico and apparently, as far as
could be judged from there, all
the way to the westward on the
valley floor, at least as far as
Cachimazzo. Indeed, it seems
dubious to me if the water shed
which is put Peruvian is said by
Baculik to be only 473 m. while
extended above the Upper Austral,
since at Levico the latter certainly
goes ~~about~~ 500 m at least.

Life 4

Passage 4
Val Ingana

The conditions in Val Ingana are very unusual, like that of the valley of Ticino, the lower gorge, branching off the upper under valley which is typically Upper Austrial, except that in the latter case the valley ascends rather rapidly, while in Val Ingana it is nearly level from Gargho to Calionazzo, evidently ^{since} a former lake beds which have been drained when the gorge was cut low enough, and some partly even by man as late as the 18th century.

Apr. 23. The doubt expressed above as to the watershed at Pergine between the rivers Ortova and Strich being rising above the Upper Austrial was quite well founded. During my visit today I found that there is no difference in the vegetation here and further down in the valley: meadow.

Apr. 5

Alouatta, howler, peaches etc etc
testify to this and the vineyard
extends at least 200' over on
either side of the valley, and chest-
nut woods on the west side appear
ly as high as 680 met. On
the other hand, spruces and
larches, evidently planted, go
down to the Lake Calanoggo. In
the gardens of Pergine oleander.

Apr. 25. Sorico. On the north exposure
the Urtica dioica scarcely goes
above the lake level. There are
the low mountains between the
lakes Calanoggo and Sorico there
is no vineyard on the side of
the latter.

Apr. 26. Torino. The valley is
of course Urtica dioica, and
some distance up on the sides

July 6

Following the road (by auto port)
through the Vela gorge, it was
found that the ^{young} vine and mulberry
have extended over the pass, ^{white} about
500 met. - On the other side, on
the W. side of Lake Tzilago (416 m),
are extensive vineyards and mul-
berry plantations.

§ July from May. *Oridictya* p. 386 grass.
~~492 m.~~

Top of pass at 1 km. W. of Cadene
near base of road.

On top of the narrow hills, ^{down to} about
700 m. are small woods of young
pines, apparently natural growth.
In the gorge, a few descend on
the N.E. exposure almost to the foot,
or about 400 m.

At Fucina, just above the foot, I
thought I saw a Cinclus fly down
the stream, but could not be sure. Just
below the foot a Helocella melange.
